Auto Ticket Classification using Flow Designer

PHASE 1 – BRAINSTORMING & IDEATION

Project Title

Auto Ticket Classification using Flow Designer

Problem Identified

The school IT helpdesk receives multiple incident requests from students and teachers, such as Wi-Fi issues, projector failures, password problems, and slow computers. IT staff currently review each request manually and assign a category. This is time-consuming and inefficient.

Proposed Idea

Develop a ServiceNow-based no-code automation solution using Flow Designer. The system analyzes keywords in the ticket short description and automatically assigns the appropriate Category and Subcategory.

Objectives

- Automatically classify incidents at the time of creation.
- Reduce manual effort for IT agents.
- Improve ticket routing efficiency.
- Provide an easily maintainable and scalable no-code solution.

Target Users

School IT helpdesk staff, students, teachers, and IT support agents.

Expected Benefits

- Faster ticket classification.
- Reduced manual work.
- Consistent Category and Subcategory assignment.
- Improved ticket routing.
- Automatic confirmation email to the caller.
