Auto Ticket Classification using Flow Designer

PHASE 2 – REQUIREMENT ANALYSIS

Business Requirements

- Automatically classify IT tickets based on the issue description.
- Assign both Category and Subcategory without manual intervention.
- Support dependent choice logic between Category and Subcategory.
- Send an automated email notification to the caller upon ticket creation.
- Store ticket information in a structured and standardized format.
- Ensure easy maintenance and future scalability.

Functional Requirements

- Create and store IT support ticket records.
- Capture Caller, Category, Subcategory, Short Description, Description, State, Assigned Group, and Assigned To.
- Automatically classify tickets through Flow Designer.
- Send an email notification to the caller.
- Validate classification through test scenarios.

Category and Subcategory Requirements

- Network → Wi-Fi
- Hardware → Projector
- Access → Forgot Password
- Performance → Slow Computer

Software Requirements

ServiceNow platform, Flow Designer, web browser, and MS Word/compatible document editor.

User Requirement

The user should be able to create an IT support ticket by providing the caller and issue description, while the system performs classification automatically.
