# Auto Ticket Classification using Flow Designer

## PHASE 6 – PROJECT TESTING

### Testing Objective

Validate that the developed solution works as expected, meets functional requirements, stores accurate data, and sends the expected notification.

### Validation Checks

- Mandatory fields are captured correctly.
- Auto-number is generated without duplication.
- Category and Subcategory values are stored accurately.
- Reference fields resolve correctly to user and group tables.

### Test Case 1 – WiFi

- Input Short Description: WiFi not working in library
- Expected Category: Network
- Expected Subcategory: WiFi
- Expected Email: Sent to caller

### Test Case 2 – Projector

- Input Short Description: Projector not turning on
- Expected Category: Hardware
- Expected Subcategory: Projector
- Expected Email: Sent to caller

### Additional Test Cases

- Password/Login issue → Access / Forgot Password.
- Slow computer issue → Performance / Slow Computer.

### Email Validation

Open All menus → System logs → Emails, search using the given subject, open the email record, and use Preview mail to verify the notification.

## Testing Result

The expected result is automatic classification and email notification based on the ticket short description. Add ServiceNow screenshots below each test case as evidence.
