Auto Ticket Classification using Flow Designer

PHASE 7 – PROJECT DOCUMENTATION

Project Summary

Auto Ticket Classification using Flow Designer is a ServiceNow automation solution for a school IT helpdesk. It automatically classifies incidents based on keywords in the short description.

Implementation Summary

The project includes a custom ticket table, structured fields, dependent Category/Subcategory choices, Flow Designer automation, and automated email notification.

Benefits

- Reduces manual classification effort.
- Improves ticket routing efficiency.
- Provides consistent data entry.
- Improves communication through automatic email confirmation.
- Uses a maintainable no-code approach.

Limitations

The supplied project document defines keyword-based classification for the listed issue types. It does not specify advanced machine-learning classification.

Future Enhancements

- Assignment automation.
- SLA tracking.
- Predictive intelligence.
- Additional ticket categories and classification rules.

Conclusion

The project demonstrates how ServiceNow Flow Designer can provide an end-to-end no-code automation solution for school IT helpdesk ticket classification.
